

OFFICIAL INCUBATION & ACADEMIC AUDIT REPORT

GROUP A -- WEEK 2

Green Sip Tech Talk Sessions -- Rwandan Code Hills 1001 AI Software Development Program

PROJECT UNDER REVIEW: UMUCOCORE

"Rooted in Culture. Inspired by Nature." -- Heritage Stationery Kit Prototype Submission

Submission: Group A -- Éclat Beverage x Umucocore Heritage Stationery
Session: Week 2 -- Green Sip Tech Talk
Evaluator: Engineer Alisia Habibi, Co-Founder & Academic Director, NTS
Status: Approved Concept -- Prototype Build Phase

Group A -- Week 2 Evaluation

This report evaluates Group A's Week 2 submission for the Green Sip Tech Talk sessions, following directly from the Week 1 Official Incubation & Academic Audit Report. Where Week 1 centered on the Éclat beverage concept, Week 2 introduces a materially different and considerably stronger submission: the **Umucocore Heritage Stationery Collection**, submitted in response to the Nazli Tech School supplemental business proposal (Doc Ref: NTS-RW-STA-2026-001). This shift in direction is assessed on its own merits below, alongside the group's continued compliance with the mandatory weekly evidence requirements set out in Week 1.

Nazli Tech School's overall verdict for Week 2: the enhanced business proposal is **well received and considerably more feasible** than the original Éclat submission. It is now the concept Nazli Tech School wishes to actively explore, incubate, and help establish as a bespoke Rwandan brand. However, strong documentation and a strong idea are not yet a prototype -- and the scorecard below reflects that Group A has not yet moved from concept to physical, on-the-ground execution.

EXECUTIVE PERFORMANCE SCORECARD

EVALUATION MODULE	TARGET OPERATIONAL STANDARD	MAX	SCORE	EVALUATOR RATIONALE & AUDIT FINDINGS
Business Proposal & Cultural Concept Development	Development of a feasible, bespoke Rwandan business concept building on Nazli Tech School's supplemental stationery-kit proposal, with clear material sourcing, product range, and brand narrative.	25	23	Excellent. The Umucocore submission is a significant leap from Week 1: a coherent, culturally-rooted brand with eight designed SKUs, all six mandated raw materials mapped to specific products, and a genuine narrative (the "Sanctuary") tying every item together. This is exactly the bespoke, Rwanda-first thinking Nazli Tech School is looking to back.
Code Hills App & Smart Tech Synchronization	Design of QR/NFC smart features per item, opening into a Sanctuary page tied to the Code Hills 1001 app, with a working technical link between physical item and digital record.	25	15	Strong conceptual design -- QR-in-pattern and NFC tagging is specified for every component, and the "Sanctuary" landing experience is well thought out. However, the smart feature currently opens an external site (umuco-core.vercel.app) rather than the Code Hills 1001 Java Swing app itself. This must be rewired so that scanning a Group A kit item opens a page inside Code Hills 1001, not a separate platform.

EVALUATION MODULE	TARGET OPERATIONAL STANDARD	MAX	SCORE	EVALUATOR RATIONALE & AUDIT FINDINGS
Physical Prototype & Ingredient Sourcing	Progressive sourcing of the six raw materials (Sisala/Urubingo reeds, Umuravumba, Umwenya, Pyrethrum, Rwandan coffee, Rwandan tea) and physical assembly of prototype items.	30	8	This is the critical gap. The submitted product photographs are polished renders/concept visuals of the existing Umucocore lifestyle range, not physical evidence of Group A sourcing Sisala, Urubingo, Umuravumba, Umwenya, or Pyrethrum in Rwandan markets this week. No kitchen-table, workshop, or artisan sourcing documentation was submitted alongside the proposal.
Authentic Process Realism, Media Proof & Compliance	Full session video recording, real market/sourcing photos, and role-based documentation per the Week 1 compliance notice (no recycled Week 1 content, clearly labelled new files).	20	6	No video clip was submitted this week -- the same gap flagged in Week 1 -- and this materially caps the score. The WhatsApp media shared shows the team together and shows finished product photography, but not the team out sourcing raw materials or fabricating a prototype. Group photos of the team together, while good for morale and coordination, do not satisfy the "physical sourcing proof" requirement.
CUMULATIVE EVALUATION SCORE		100	52	Grade D+ (Approved Concept -- Physical Execution Pending)

Score progression note: Week 1 total was 56/100 (Grade D+, Theoretical Hold). Week 2 total is 52/100. The numeric score has moved down slightly against a stricter Week 2 rubric that now weights physical prototype sourcing more heavily (30 points, up from a blended standard), reflecting the programme's phased expectation that Week 2 should show real-world sourcing, not only refined documentation. Qualitatively, however, Nazli Tech School considers Group A's Week 2 direction a substantial improvement in feasibility and business quality over Week 1.

ACADEMIC & INCUBATION AUDIT FEEDBACK

1. What Nazli Tech School Likes About This Week's Submission

Group A's shift toward the Umucocore Heritage Stationery Collection is exactly the kind of bespoke, Rwanda-rooted business thinking this incubation track is designed to surface. Specific strengths noted by the evaluation panel:

- A brand identity carrying genuine Rwandan heritage -- the Imigongo pattern language, Kinyarwanda naming, and a product range (rechargeable fan, hat, t-shirt, pen, watch, water bottle, notebook) that already reads as a coherent collection rather than a set of disconnected items.
- Correct and creative use of all six mandated raw materials (Sisala and Urubingo reeds, Umuravumba, Umwenya, Pyrethrum, Rwandan coffee, and Rwandan tea), each mapped to a specific product function rather than used decoratively.
- Inclusion of the smart NFC/QR feature exactly as requested -- tap or scan opens a "Sanctuary" page tied to each item's story, origin, and cultural meaning.
- A tourism and global-audience lens is already present in the submission, including diaspora gifting and tourism-sector positioning -- this is the right instinct and the foundation Nazli Tech School wants to build on.

2. The Global Storytelling Extension -- New Suggestion from Nazli Tech School

Building on Group A's own "Sanctuary" concept, Nazli Tech School wants the group to design and pitch a recurring global engagement feature, to be published on the students' Code Hills 1001 app:

Concept -- "Sanctuary Stories": every three to six months, open a free, global call inviting anyone, anywhere, to submit a short piece of writing -- a personal story, reflection, or poem -- that connects a natural resource or tradition from their own place in the world back to the resources and heritage behind the Umucocore kit (coffee, tea, reeds, botanicals, craft). Entries are submitted and published through a dedicated page inside the Code Hills 1001 app, free of charge, open globally.

Reward mechanic: the strongest entry each cycle receives a bespoke, customised Umucocore kit shipped directly from Rwanda -- turning every winner into an ambassador and giving the brand an organic, low-cost growth loop that reinforces the "archive that travels" narrative Group A has already articulated.

Group A should treat this as an assignment for their next submission: sketch how this feature fits into the Code Hills 1001 database schema and UI (submission form, moderation/judging flow, winner announcement, and shipping trigger), alongside the existing item-level QR/NFC Sanctuary pages.

3. What Is Missing -- and Non-Negotiable for Week 3

Nazli Tech School is glad to see the documentation and the idea, but incubation funding cannot be released against concept work alone. Group A must now move from paper to prototype. Two requirements were not met this week and must not be missed again:

- **No video clip was submitted**, for the second consecutive week. A full, unedited video recording -- either of the live meeting or of the team actively sourcing/building -- is mandatory and directly affects the score until it is consistently provided.
- **No sourcing photos.** The pictures shared this week show the team together, which is good for documenting team cohesion, but Nazli Tech School needs pictures and video of the team physically out sourcing raw materials -- in markets, with artisans, at weaving or bottling locations across Rwanda -- not group photos alone.

4. Week 3 Directives -- Path to the Cap Points and First Stipend

Nazli Tech School has set a cumulative cap of **200 points** across the incubation track. Reaching this cap unlocks a first-stage stipend allowance of **USD 30** to help Group A begin sourcing materials and assembling a physical prototype, connected to the smart features already designed. To move toward this cap in Week 3, Group A must:

- Physically source materials -- go to markets, artisans, and suppliers across Rwanda for Sisala/Urubingo reeds, Umuravumba, Umwenya (clove basil), Pyrethrum, and Rwandan coffee and tea, and document this with real photos and video, not staged or generic team photography.
- Begin assembling at least one physical prototype item (for example, the reed pen or the shield-divider bookmark) from sourced materials -- photograph and film the making process, hurdles included.
- Submit a full, unedited video recording of the week's activity, covering both sourcing and assembly.
- Design and enter the QR/NFC code as a manual entry point inside the Code Hills 1001 app (not necessarily a physical scan yet) that opens a Sanctuary-style page for one item -- showing its natural resource, origin, cultural meaning, health/use benefit, and supporting visuals.
- Sketch the "Sanctuary Stories" global submission feature described above, and show how it will live inside the Code Hills 1001 database and UI.

If Group A delivers meaningfully against these directives in Week 3 and reaches the cap points, Nazli Tech School will release the first USD 30 stipend allowance to support continued prototype sourcing and assembly. Continued strong performance and evidence submission in subsequent weeks will unlock further support toward a completed prototype, at which point Nazli Tech School's management team will formally evaluate Umucocore as a business it wishes to take forward in partnership with Group A.

5. Mandatory Weekly Evidence -- Carried Forward From Week 1

The same non-negotiable submission protocols from the Week 1 report remain in force for Week 3:

- Full, unedited meeting video recordings, with all cameras on, or clear footage of the team in an aesthetic green setting.
- Physical sourcing and workshop proof -- photos and video of team members purchasing local materials and beginning prototype assembly, not staged product photography alone.
- Active role execution evidence per assigned duties (Operations, Formulation/Craft, Software, Marketing leads), each documented individually.
- Punctual, clean Google Drive organisation in a clearly labelled "Week 3" subfolder, with no recycled content from prior weeks.

APPENDIX -- WEEK 2 SUBMISSION EVIDENCE REVIEWED

The following materials were reviewed as part of this evaluation: the Umucocore Heritage Stationery Prototype Submission (PDF), WhatsApp product photography shared by the group, a team photograph, and a screenshot of ongoing Code Hills 1001 development work on Replit.

Umucocore Product Concept Photography (shared via WhatsApp)

Product concept photography for the Umucocore range (notebook, fan, watch, water bottle, t-shirt, hat) shared to the group's WhatsApp thread. Strong visual quality, but these are concept/finished-product images, not sourcing or fabrication evidence.

Team Documentation Photos

Team photos showing group cohesion and coordination -- valued for team morale, but do not substitute for the required physical sourcing and prototype-building documentation.

Code Hills 1001 App -- Active Development (Replit)

Code Hills 1001 home screen and login flow under active development on Replit -- confirms continued software progress, though the Umucocore smart-tag feature is not yet wired into this build.

The full Umucocore Heritage Stationery Prototype Submission document was reviewed in detail and forms the basis of the Business Proposal & Cultural Concept Development score above.

EVALUATOR SIGN-OFF

Group A has presented a genuinely improved, feasible, and culturally distinctive business direction this week. Nazli Tech School is enthusiastic about continuing to incubate Umucocore and will support the group toward a first prototype and stipend release, contingent on real, physically-documented sourcing and build work -- backed by video evidence -- in Week 3.
