

DevOps Engineer Roadmap

Phase 1: Foundations (2–4 weeks)

- 1 Learn Linux basics (commands, file system, permissions)
- 2 Understand networking basics (IP, ports, DNS)
- 3 Start using Git and GitHub

Phase 2: Programming & Scripting (2–4 weeks)

- 1 Learn basic Python or Bash scripting
- 2 Automate simple tasks (file handling, backups)

Phase 3: Containers (2–3 weeks)

- 1 Learn Docker (images, containers, Dockerfile)
- 2 Containerize a simple app (Node.js or Python)

Phase 4: CI/CD (2–3 weeks)

- 1 Learn GitHub Actions or GitLab CI
- 2 Automate build and deployment pipelines

Phase 5: Cloud (3–5 weeks)

- 1 Learn basics of AWS (EC2, S3, IAM)
- 2 Deploy your app to the cloud

Phase 6: Advanced DevOps (Ongoing)

- 1 Learn Kubernetes (container orchestration)
- 2 Monitoring (Prometheus, Grafana)
- 3 Infrastructure as Code (Terraform)

Final Project

- 1 Build an app, dockerize it, deploy to cloud, add CI/CD pipeline
